

Metro Ethernet over FTTx Infrastructure

Metro Ethernet services provide carrier-grade, highly scalable and secure connectivity tailored to meet the demanding needs of businesses and enterprises across Nigeria.

By leveraging our robust Fibre-to-the-X (FTTx) infrastructure, we empower Internet Service Providers (ISPs) with a high-performance foundational network, enabling them to deliver exceptional reliability and service to their business clients.

Built, operated and meticulously maintained by Open Access Metro and Open Access Technical Services - both part of the WIOCC Group - our Metro Ethernet service is a dedicated, high-speed networking solution delivered over our advanced fibre infrastructure.

It provides a secure and efficient solution for businesses to connect multiple locations, access cloud services and handle high-volume data transfers - with guaranteed quality of service.

Why Open Access Metro Ethernet?

1:1 Contention

Dedicated and Secure Connectivity

Up to 1Gbps

Ultra-High Bandwidth and Scalability

99% SLA

On the core - Exceptional Reliability and Uptime

24/7

Priority Support and Rapid Response

Optimised for Business

-  Seamless inter-branch connectivity
-  High-speed, dedicated cloud access
-  Reliable data centre interconnectivity
-  Enabling Voice, video and mission-critical application support
-  Guaranteed bandwidth and performance for demanding operations
-  Cost Effective and Future-proof
